

Jash Data Sciences

- Strong Python programming skills with hands-on project experience, Git proficiency, and a basic understanding of CUDA
- Expertise in Deep Learning architectures (Transformers, CNNs, RNNs) alongside a strong theoretical understanding of foundational ML algorithms (GBMs, Random Forests)
- Deep proficiency in PyTorch or TensorFlow, with a strong emphasis on custom layer implementation and neural network training loops
- Hands-on experience with modern training paradigms, including Self-supervised Learning, Contrastive Learning, and advanced Transfer Learning
- Experience with NLP, Computer Vision, or Time Series Analysis
